

## INSTALLATION GUIDE

### PRE-INSTALLATION

#### Surface Mount

Disconnect power source prior to installation.

- Thoroughly clean where the LED strip will be installed.
- Test the LED tape light before beginning the installation process to confirm no damage has occurred during transport.

### SAFETY

Read all instructions before installation.

These products may represent a possible shock or fire hazard if improperly installed.

Do not install less than 6 inches from a combustible material.

-  Product should be installed by a qualified electrician.
-  Product should be installed in accordance with these instructions and current electrical codes.
-  Must be installed with CORE Lighting Drivers
-  Product is 12V/ 24V. Do not connect to 120V power source.

### INSTALLATION

#### STEP 1

Determine the length of your selected tape light needed for your installation of choice. If the length needs to be adjusted on site, using a pair of scissors, cut between the soldering pads. (Figure 1)

*\*Always cut from the end without a lead wire.*

#### STEP 2

Feed the wire feed through the pre-drilled hole in the LED profile endcap. (Figure 2)

#### PROFILE ENDCAPS WITHOUT HOLES

Depending on your chosen LED profile, the endcap may not have a pre-existing hole. If you plan to run the lead wire through the profile, carefully drill a hole in the profile endcap. If you plan to run the lead wire through the bottom of the profile, carefully drill a hole at the base of the profile.

*\*Refer to spec sheet of chosen profile.*

#### STEP 3

Remove the adhesive paper backing from the LED tape and firmly press the LED tape along the interior tray of your chosen profile or surface. (Figure 3)

#### STEP 4

Connect the LED supply wires to the source wires.
